

The printer

The printer is connected wirelessly to the UK_Internet_TV router ONLY. So in order to print, you must be connected to the UK_Internet_TV Wi-Fi connection. The password for the router is frenchvilla

Log into that router with your device before trying to print and add the printer from the network.

To add the printer first ensure the printer is on and the Wi-Fi light is on and green. Then press the Start button in windows, select devices and printers, click add printer, select Add a network, wireless or Bluetooth printer and click next. The printer EPSON B0445D will appear in that list. Click add and finish. You're now ready to print.

If you have a different device or an older operating system you can also find the USB printer cable, should you want to connect it to your device or the PS3. It is located in one of the drawers below the TV. Additional printer cartridges are to be found in the same draw.
